| Landowner: | State |
| Operator: | Hilcorp Alaska |
| First Production: | 1965 |
| Wells: | 63 |
| Oil Output (2023): | 325K BBL |
| Gas Output (2023): | 0.4 BCF |
| Peak Production: | 1969 (Oil) 1971 (Gas) |

Ownership Interest: **100% Hilcorp Alaska**

Discovered by Unocal and Texaco and operated by Unocal until Hilcorp took over in 2011. Platform Spark was most productive early on; currently, only the Monopod platform is producing from the Middle Kenai, Hemlock, and West Foreland pools. Another field in the unit, McArthur River, added 945,000 barrels of oil and 4.9 bcf of gas in 2023 from the Grayling, King Salmon, Dolly Varden, and Steelhead platforms. Steelhead was the first new Cook Inlet platform in eighteen years when it was installed in 1986. Pipelines connect all the platforms to the Trading Bay Production Facility just outside the Redoubt Bay critical habitat area.
